Aims
Geographical Abstracts: Physical Geography is a unique bibliographic information source providing comprehensive coverage of the physical geography literature.

Subject scope and coverage
The information contained in Geographical Abstracts: Physical Geography is derived from over 1000 leading geographical journals, plus books, conference proceedings, reports, and theses. For further details on scope refer to the contents page. A full list of the journals scanned for Geographical Abstracts: Physical Geography is published in the annual index.

Abstracts
Geographical Abstracts: Physical Geography provides full bibliographic details of the publications covered, plus an informative abstract. Author abstracts are used where possible. For articles in languages other than English, the original language title and English translation are given.

Indexes
The annual index contains subject, geographical and author indexes. Each abstract is indexed by terms that highlight the main points of the original material. Each abstract is assigned geographical index terms where appropriate. The index is published separately at the end of each publication year.

On-line service
All material published in Geographical Abstracts: Physical Geography is also available on GEOBASE, the Elsevier/Geo Abstracts on-line database. GEOBASE is available on DIALOG (File 292) and Maxwell Orbit Infoline.

Back issues
Back issues are available for Geographical Abstracts: Physical Geography, and also for the four journals that were incorporated into the current title. For further details please write to the subscription order address given below.

Publisher
Geographical Abstracts: Physical Geography is published by Elsevier/Geo Abstracts part of Elsevier Science Publishers Ltd.
Enquiries concerning editorial and production matters should be addressed to: Elsevier/Geo Abstracts, Regency House, 34 Duke Street, Norwich NR3 3AP, UK.

Using the index

Subject Index

A single string of keywords is provided for each abstract, each element of which has a separate entry in the index, and appears with the other elements of the string followed by any regional terms from the abstract. The number **immediately following** is the reference number for the abstract.
For example, the string:

frontal cloud, mesostructure, front, embedded convection, USSR; 11269

will appear as:

frontal cloud
mesostructure, front, embedded convection, USSR; 11269

mesostructure
front, embedded convection, frontal cloud, USSR; 11269

front
embedded convection, frontal cloud, mesostructure, USSR; 11269

embedded convection
frontal cloud, mesostructure, front, USSR; 11269

Where a keyword occurs more than once the entries are blocked and sorted in alphabetical order by the second keyword. For example:

momentum flux
atmosphere surface exchange, turbulent exchange research; 10012.
energy density, wave dissipation, velocity fluctuation, radar, Japan, Shigaraki; 01849.
horizontal wind, vertical wind disturbance....etc

Where a general term is being used in a search, it will probably be more efficient to look up a more specific term in the first instance and then use the more general term as a qualifying term.
For example:
(1) **carbonate platform** and then (2) **Cretaceous** rather than
(1) **Cretaceous** and then (2) **carbonate platform**

All the index terms are selected by the editors and so a reasonable degree of consistency can be expected. However, exceptions do occur and it is worth searching all alternative or similar terms.
For example:
carbon-14 see also **radiocarbon**

In some cases abbreviations have been used as index terms. This has been limited to internationally accepted abbreviations.
For example:
GIS - geographic information systems

Please note that English spelling variants have been used throughout (mechanisation; labour;) and that wherever possible the terms are indexed in the singular - except in cases where to do so would change the meaning of the term.

Author Index

Each author is indexed separately from co-authors, each entry being followed by one or more abstract reference numbers. Please remember to check for listings under various possible combinations of initials.
For example:
Campbell, B. 08336
Campbell, B.A. 02204
may or may not refer to the same individual.

In cases where there are more than six authors, we list the first one cited followed by '& others', so only the first author will appear in the index.
Although in general only the last name is indexed as the surname, in certain cases each separate element of a surname will have an entry. These are:

where surnames contain prefixes; e.g. La, De

where Latin surnames contain both parental names; e.g. A. Garcia Alvarez

where Chinese and some Indo-Chinese names are used; e.g. Peng Chu Zhang

If in doubt, check all possibilities.

Regional Index

Although regional index terms are integrated within the subject index to give context to the keyword string, there is also a separate regional index. This operates on a hierarchical system. Under each country (or broader regional term where appropriate) the terms are progressively indented to the right, to indicate increasing specificity, and the string is only complete when an abstract reference number appears.
For example:

USA, Minnesota, Lake Calhoun

would appear thus:

USA
Minnesota
Lake Calhoun; 03006

Another area/town name in the same State (e.g. Minneapolis) would appear at the same level of indentation:

USA
Minnesota
Lake Calhoun; 03006
Minneapolis; 02879

Note:
All abstracts are indexed as specifically as possible so that, for example, the abstract numbers referenced under "Africa" will NOT contain ALL references to African studies, only those which cannot be narrowed down to a geographically smaller area, and so users will need to check individual country listings. Also, within a country listing the items entered under a town or regional name will NOT appear in the listing of numbers for the general entry for its home country.

Journal Listing

This is a simple alphabetical listing of nearly 1000 periodicals cited in **Geographical Abstracts: Physical Geography** during 1991. A full listing of journals scanned by Elsevier/Geo Abstracts is available from the publisher.
